CHAPTER ARTICLE BRIEF

Project management for socio-environmental impact

Original publication: 2022-12-11 | Social impact

Abstract

This chapter article describes a community-focused environmental project and the project management capabilities used to deliver it. It connects sustainable practices with local livelihoods and biodiversity, and highlights the importance of stakeholder alignment, collaborative delivery, risk management and leading without formal authority. Reported project outcomes remain part of the historical source account.

Key highlights

- Social and environmental projects require alignment with community needs and beneficiaries.
- Open partnerships help coordinate work across several contributing organisations.
- Leading without authority and managing stakeholder relationships are practical delivery skills.
- The source reports outcomes involving trees, biogas and access to clean water.

This PDF is a concise article brief prepared from the chapter's published account. The original article remains available through the source link.
